Underfloor heating (UFH) is attracting more attention:

Myson has consolidated its underfloor heating businesses by merging them with that of sister organisation, Vogel & Noot, to form a new, larger and dedicated business – Myson Floortec.

Barry Lynch, Myson's group product manager says: 'This is a key development for the company. Through this reorganisation and new investment, we will be able to provide more new products, greater technical support and dedicated deliveries.'

Said to be typically 20-30%

Paul van de Woning of the Myson Floortec team

cheaper to run than conventional heating, UFH is reportedly becoming increasingly popular. In 2007, the UK domestic heating market was valued at £1.3bn with demand for UFH increasing by 20% year on year.

Myson Floortec will benefit from a new central distribution centre in Birtley, Gateshead, and transport fleet alongside an enlarged sales force and administration team. A modern training and technical

support centre will go to support the new initiative.

Barry adds: 'Underfloor heating offers many benefits to customers from improved energy efficiency to a more natural and even distribution of heat.'

Speedheat has beaten a triple challenge of curved walls, lofty ceilings and a range of flooring to successfully install its electrical underfloor heating.

The system was chosen by new owners wanting to put their stamp on their unusually shaped modern home. The redesign included removing the original gas fired heating because radiators spoiled the clean, architectural lines of the rooms.

Different floor finishes were chosen, including solid oak, ceramic and carpet – so with 16 rooms of varying shapes and sizes and three bathrooms, the heating had to be flexible, controllable and efficient.

All Speedheat installations are designed specifically for each project, so expert engineers created a bespoke system that met all the issues – even fitting curved rooms!

And neither were there any major upheavals to the floor or subfloor, leaving the family warm in the knowledge that tests have proved Speedheat will not damage or discolour even the most sensitive flooring.

Solid oak flooring and Speedheat underfloor heating in the music room and (inset above) the curved hallway of this unusual home

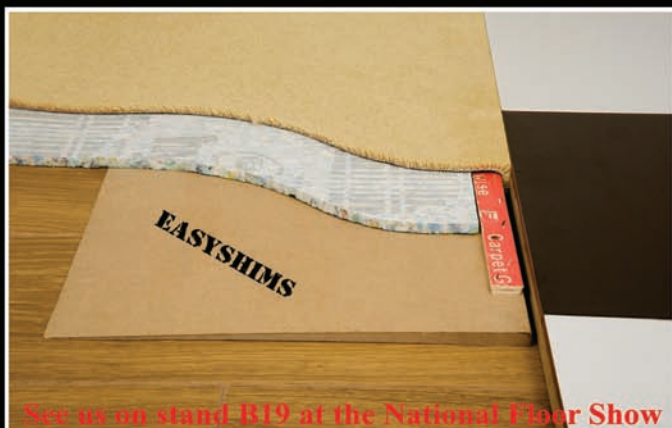

New EasyShims - fixing your height differences.

Easyshims are for use when installing carpet next to hardwood, ceramic tile, stone and marble floors. They form a 200mm ramp to give a flush transition.

Also with side shims, should the carpet shim protrude into the hallway.

Available in 6mm, 9mm and 12mm heights.
